

76137**Poikilitic Impact Melt Breccia****2.46 g, 1 x 1.5 x 1.8 cm****INTRODUCTION**

Sample 76137 is apparently the same lithology as 76135. It was scooped from the soil next to turning point rock (LRVIO)-the astronauts were attempting to get a piece of turning point rock by sampling the fillet

next to it. Turning point rock is a boulder that rolled down from (or was blasted off of) North Massif.

Sample 76137 is a light-colored impact melt breccia (Fig. 1). It has not been studied.

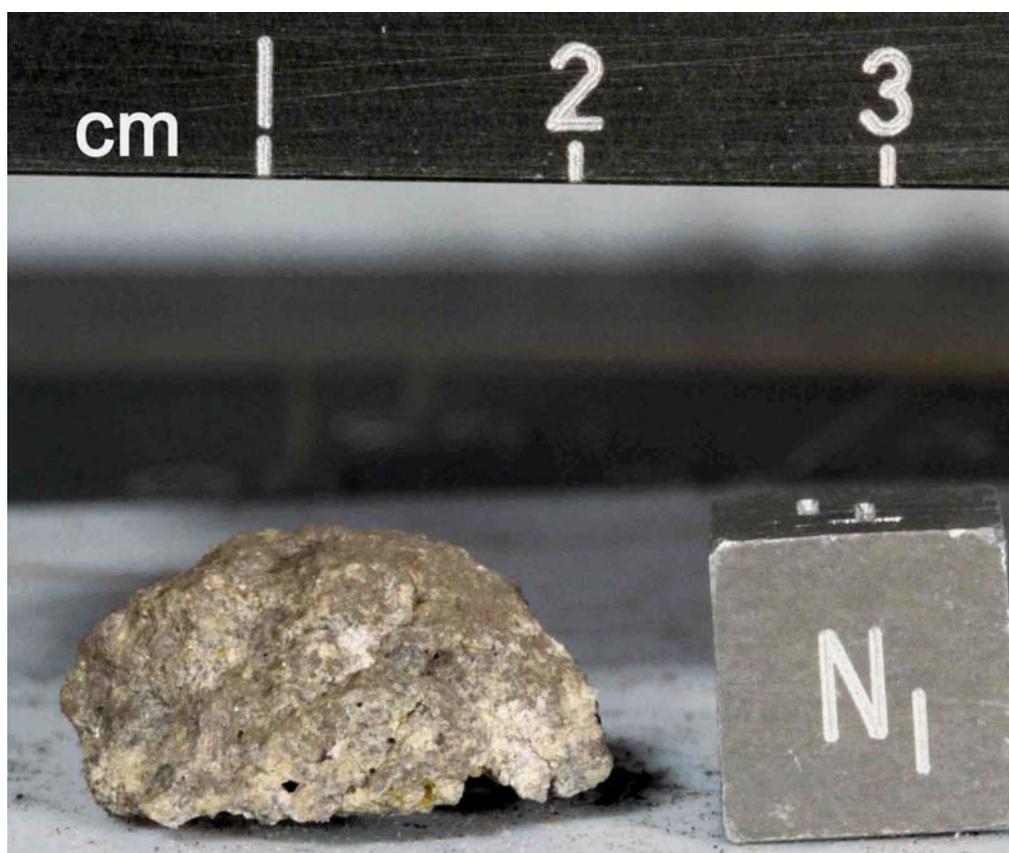

Figure 1: Poikilitic impact melt breccia 76137. Cube is 1 cm. S73-21762.
